

**ACE Antibody (monoclonal) (M01)**  
Mouse monoclonal antibody raised against a partial recombinant ACE.  
Catalog # AT1024a

## Specification

---

### ACE Antibody (monoclonal) (M01) - Product Information

Application	WB, E
Primary Accession	<a href="#">P12821</a>
Other Accession	<a href="#">BC036375</a>
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG1 Kappa
Calculated MW	149715

### ACE Antibody (monoclonal) (M01) - Additional Information

Gene ID 1636

#### Other Names

Angiotensin-converting enzyme, ACE, 321-, Dipeptidyl carboxypeptidase I, Kininase II, CD143, Angiotensin-converting enzyme, soluble form, ACE, DCP, DCP1

#### Target/Specificity

ACE (AAH36375, 592 a.a. ~ 701 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

#### Dilution

WB~~1:500~1000

#### Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

#### Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

#### Precautions

ACE Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

### ACE Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)

- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### ACE Antibody (monoclonal) (M01) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (37.73 KDa) .

Detection limit for recombinant GST tagged ACE is approximately 0.03ng/ml as a capture antibody.

### ACE Antibody (monoclonal) (M01) - Background

This gene encodes an enzyme involved in catalyzing the conversion of angiotensin I into a physiologically active peptide angiotensin II. Angiotensin II is a potent vasopressor and aldosterone-stimulating peptide that controls blood pressure and fluid-electrolyte balance. This enzyme plays a key role in the renin-angiotensin system. Many studies have associated the presence or absence of a 287 bp Alu repeat element in this gene with the levels of circulating enzyme or cardiovascular pathophysiology. Multiple alternatively spliced transcript variants encoding different isoforms have been identified, and two most abundant spliced variants encode the somatic form and the testicular form, respectively, that are equally active.
