Lane 2: Non-transfected lysate.

Detection limit for recombinant GST tagged FABP4 is approximately 0.3ng/ml as a capture antibody.

FABP4 Antibody (monoclonal) (M06) - Background

FABP4 encodes the fatty acid binding protein found in adipocytes. Fatty acid binding proteins are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands. It is thought that FABPs roles include fatty acid uptake, transport, and metabolism.
