

## **FGF8 Antibody (monoclonal) (M05)**

Mouse monoclonal antibody raised against a full length recombinant FGF8.

Catalog # AT2036a

### **Specification**

---

#### **FGF8 Antibody (monoclonal) (M05) - Product Information**

Application	E
Primary Accession	<a href="#">P55075</a>
Other Accession	<a href="#">NM_033164</a>
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2a Kappa
Calculated MW	26525

#### **FGF8 Antibody (monoclonal) (M05) - Additional Information**

**Gene ID** 2253

##### **Other Names**

Fibroblast growth factor 8, FGF-8, Androgen-induced growth factor, AIGF, Heparin-binding growth factor 8, HBGF-8, FGF8, AIGF

##### **Target/Specificity**

FGF8 (NP\_149354, 65 a.a. ~ 133 a.a) full length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

##### **Format**

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

##### **Storage**

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

##### **Precautions**

FGF8 Antibody (monoclonal) (M05) is for research use only and not for use in diagnostic or therapeutic procedures.

#### **FGF8 Antibody (monoclonal) (M05) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)

- [Flow Cytometry](#)
- [Cell Culture](#)

### FGF8 Antibody (monoclonal) (M05) - Images

Detection limit for recombinant GST tagged FGF8 is approximately 0.3ng/ml as a capture antibody.

Proximity Ligation Analysis of protein-protein interactions between FGFR2 and FGF8. HeLa cells were stained with anti-FGFR2 rabbit purified polyclonal 1:1200 and anti-FGF8 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

### FGF8 Antibody (monoclonal) (M05) - Background

The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein is known to be a factor that supports androgen and anchorage independent growth of mammary tumor cells. Overexpression of this gene has been shown to increase tumor growth and angiogenesis. The adult expression of this gene is restricted to testes and ovaries. Temporal and spatial pattern of this gene expression suggests its function as an embryonic epithelial factor. Studies of the mouse and chick homologs revealed roles in midbrain and limb development, organogenesis, embryo gastrulation and left-right axis determination. The alternative splicing of this gene results in four transcript variants.
