

## **FH Antibody (monoclonal) (M09)**

Mouse monoclonal antibody raised against a full length recombinant FH.

Catalog # AT2045a

### **Specification**

---

#### **FH Antibody (monoclonal) (M09) - Product Information**

Application	WB, IHC, E
Primary Accession	<a href="#">P07954</a>
Other Accession	<a href="#">BC003108</a>
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2b Kappa
Calculated MW	54637

#### **FH Antibody (monoclonal) (M09) - Additional Information**

**Gene ID** 2271

#### **Other Names**

Fumarate hydratase, mitochondrial, Fumarase, FH

#### **Target/Specificity**

FH (AAH03108, 33 a.a. ~ 510 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

#### **Dilution**

WB~~1:500~1000

#### **Format**

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

#### **Storage**

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

#### **Precautions**

FH Antibody (monoclonal) (M09) is for research use only and not for use in diagnostic or therapeutic procedures.

#### **FH Antibody (monoclonal) (M09) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)

- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### FH Antibody (monoclonal) (M09) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (78.32 KDa) .

FH monoclonal antibody (M09), clone 3E7 Western Blot analysis of FH expression in HeLa ( (Cat # AT2045a )

Immunoperoxidase of monoclonal antibody to FH on formalin-fixed paraffin-embedded human seminoma. [antibody concentration 3 ug/ml]

Detection limit for recombinant GST tagged FH is 0.3 ng/ml as a capture antibody.

### **FH Antibody (monoclonal) (M09) - Background**

The protein encoded by this gene is an enzymatic component of the tricarboxylic acid (TCA) cycle, or Krebs cycle, and catalyzes the formation of L-malate from fumarate. It exists in both a cytosolic form and an N-terminal extended form, differing only in the translation start site used. The N-terminal extended form is targeted to the mitochondrion, where the removal of the extension generates the same form as in the cytoplasm. It is similar to some thermostable class II fumarases and functions as a homotetramer. Mutations in this gene can cause fumarase deficiency and lead to progressive encephalopathy.
