

## PSME2 Antibody (monoclonal) (M01)

Mouse monoclonal antibody raised against a full length recombinant PSME2.

Catalog # AT3474a

### Specification

---

#### PSME2 Antibody (monoclonal) (M01) - Product Information

Application	IF, WB
Primary Accession	<a href="#">O9UL46</a>
Other Accession	<a href="#">BC019885</a>
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG1 kappa
Calculated MW	27402

#### PSME2 Antibody (monoclonal) (M01) - Additional Information

Gene ID 5721

##### Other Names

Proteasome activator complex subunit 2, 11S regulator complex subunit beta, REG-beta, Activator of multicatalytic protease subunit 2, Proteasome activator 28 subunit beta, PA28b, PA28beta, PSME2

##### Target/Specificity

PSME2 (AAH19885, 1 a.a. ~ 239 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

##### Dilution

WB~~1:500~1000

##### Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

##### Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

##### Precautions

PSME2 Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

#### PSME2 Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)

- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### PSME2 Antibody (monoclonal) (M01) - Images

Immunofluorescence of monoclonal antibody to PSME2 on HeLa cell . [antibody concentration 10 ug/ml]

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (52.03 KDa) .

Western Blot analysis of PSME2 expression in transfected 293T cell line by PSME2 monoclonal antibody (M01), clone 3F11-1A3.

Lane 1: PSME2 transfected lysate(27.4 KDa).

Lane 2: Non-transfected lysate.

### **PSME2 Antibody (monoclonal) (M01) - Background**

The 26S proteasome is a multicatalytic proteinase complex with a highly ordered structure composed of 2 complexes, a 20S core and a 19S regulator. The 20S core is composed of 4 rings of 28 non-identical subunits; 2 rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. The 19S regulator is composed of a base, which contains 6 ATPase subunits and 2 non-ATPase subunits, and a lid, which contains up to 10 non-ATPase subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides. The immunoproteasome contains an alternate regulator, referred to as the 11S regulator or PA28, that replaces the 19S regulator. Three subunits (alpha, beta and gamma) of the 11S regulator have been identified. This gene encodes the beta subunit of the 11S regulator, one of the two 11S subunits that is induced by gamma-interferon. Three beta and three alpha subunits combine to form a heterohexameric ring. Six pseudogenes have been identified on chromosomes 4, 5, 8, 10 and 13.
