

redFluor™ 710 Anti-Human CD19 (HIB19) Antibody
Catalog # ATB10408

Specification

redFluor™ 710 Anti-Human CD19 (HIB19) Antibody - Product Information

Application	FC
Isotype	Mouse IgG1, kappa
Concentration	5 uL (0.125 ug)/test
Reactivity	Human
Formulation	10 mM NaH ₂ PO ₄ , 150 mM NaCl, 0.09% NaN ₃ , 0.1% gelatin, pH7.2
Host	Mouse

redFluor™ 710 Anti-Human CD19 (HIB19) Antibody - Additional Information

Gene ID	930
Gene Name	CD19
Alternative Name(s)	
Leu-12, B4	

Format
redFluor™ 710

Storage Conditions
2-8°C protected from light

redFluor™ 710 Anti-Human CD19 (HIB19) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

redFluor™ 710 Anti-Human CD19 (HIB19) Antibody - Images

Human peripheral blood lymphocytes were stained with 5 uL (0.125 ug) redFluor™ 710 Anti-Human CD19 (ATB10408) (solid line) or 0.125 ug redFluor™ 710 Mouse IgG1 isotype control.

redFluor™ 710 Anti-Human CD19 (HIB19) Antibody - Background

The HIB19 antibody reacts with human CD19, a 95 kDa glycoprotein which acts as a co-receptor, along with CD21, CD81 and CD225, in support of the functional B cell receptor (BCR). This complex provides antigen-specific recognition and subsequent activation of B cells to proliferate and differentiate into antibody-secreting cells (plasma cells) or memory B cells, which are crucial for secondary antigen encounter. CD19 is a lineage-differentiation marker, as its expression is detectable at the earliest B cell stages, through development, and is finally lost upon transition to mature plasma cells.

The HIB19 antibody is widely used as a phenotypic marker for CD19 expression on B cells, as well as on dendritic cell subsets.
