

BLVRB Antibody (C-term)
Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AW5035

Specification

BLVRB Antibody (C-term) - Product Information

Application	WB,E
Primary Accession	P30043
Other Accession	O923D2 , P52556
Reactivity	Human, Mouse
Predicted	Bovine
Host	Rabbit
Clonality	polyclonal
Calculated MW	22119 Da
Isotype	Rabbit IgG
Antigen Source	HUMAN

BLVRB Antibody (C-term) - Additional Information

Gene ID 645

Antigen Region
161-175

Other Names

Flavin reductase (NADPH), FR, Biliverdin reductase B, BVR-B, Biliverdin-IX beta-reductase, Green heme-binding protein, GHBP, NADPH-dependent diaphorase, NADPH-flavin reductase, FLR, BLVRB, FLR

Dilution

WB~~1:1000

Target/Specificity

This BLVRB antibody is generated from a rabbit immunized with a KLH conjugated synthetic peptide between 161-175 amino acids from the C-terminal region of human BLVRB.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

BLVRB Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

BLVRB Antibody (C-term) - Protein Information

Name BLVRB ([HGNC:1063](#))**Function**

Enzyme that can both act as a NAD(P)H-dependent reductase and a S-nitroso-CoA-dependent nitrosyltransferase (PubMed:[10620517](http://www.uniprot.org/citations/10620517) target="_blank">10620517, PubMed:[18241201](http://www.uniprot.org/citations/18241201) target="_blank">18241201, PubMed:[27207795](http://www.uniprot.org/citations/27207795) target="_blank">27207795, PubMed:[38056462](http://www.uniprot.org/citations/38056462) target="_blank">38056462, PubMed:[7929092](http://www.uniprot.org/citations/7929092) target="_blank">7929092). Promotes fetal heme degradation during development (PubMed:[10858451](http://www.uniprot.org/citations/10858451) target="_blank">10858451, PubMed:[18241201](http://www.uniprot.org/citations/18241201) target="_blank">18241201, PubMed:[7929092](http://www.uniprot.org/citations/7929092) target="_blank">7929092). Also expressed in adult tissues, where it acts as a regulator of hematopoiesis, intermediary metabolism (glutaminolysis, glycolysis, TCA cycle and pentose phosphate pathway) and insulin signaling (PubMed:[27207795](http://www.uniprot.org/citations/27207795) target="_blank">27207795, PubMed:[29500232](http://www.uniprot.org/citations/29500232) target="_blank">29500232, PubMed:[38056462](http://www.uniprot.org/citations/38056462) target="_blank">38056462). Has a broad specificity oxidoreductase activity by catalyzing the NAD(P)H-dependent reduction of a variety of flavins, such as riboflavin, FAD or FMN, biliverdins, methemoglobin and PQQ (pyrroloquinoline quinone) (PubMed:[10620517](http://www.uniprot.org/citations/10620517) target="_blank">10620517, PubMed:[18241201](http://www.uniprot.org/citations/18241201) target="_blank">18241201, PubMed:[7929092](http://www.uniprot.org/citations/7929092) target="_blank">7929092). Contributes to fetal heme catabolism by catalyzing reduction of biliverdin IXbeta into bilirubin IXbeta in the liver (PubMed:[10858451](http://www.uniprot.org/citations/10858451) target="_blank">10858451, PubMed:[18241201](http://www.uniprot.org/citations/18241201) target="_blank">18241201, PubMed:[7929092](http://www.uniprot.org/citations/7929092) target="_blank">7929092). Biliverdin IXbeta, which constitutes the major heme catabolite in the fetus is not present in adult (PubMed:[10858451](http://www.uniprot.org/citations/10858451) target="_blank">10858451, PubMed:[18241201](http://www.uniprot.org/citations/18241201) target="_blank">18241201, PubMed:[7929092](http://www.uniprot.org/citations/7929092) target="_blank">7929092). Does not reduce bilirubin IXalpha (PubMed:[10858451](http://www.uniprot.org/citations/10858451) target="_blank">10858451, PubMed:[18241201](http://www.uniprot.org/citations/18241201) target="_blank">18241201, PubMed:[7929092](http://www.uniprot.org/citations/7929092) target="_blank">7929092). Can also reduce the complexed Fe(3+) iron to Fe(2+) in the presence of FMN and NADPH (PubMed:[10620517](http://www.uniprot.org/citations/10620517) target="_blank">10620517). Acts as a protein nitrosyltransferase by catalyzing nitrosylation of cysteine residues of target proteins, such as HMOX2, INSR and IRS1 (PubMed:[38056462](http://www.uniprot.org/citations/38056462) target="_blank">38056462). S-nitroso-CoA-dependent nitrosyltransferase activity is mediated via a 'ping-pong' mechanism: BLVRB first associates with both S-nitroso-CoA and protein substrate, nitric oxide group is then transferred from S-nitroso-CoA to Cys-109 and Cys-188 residues of BLVRB and from S-nitroso-BLVRB to the protein substrate (PubMed:[38056462](http://www.uniprot.org/citations/38056462) target="_blank">38056462). Inhibits insulin signaling by mediating nitrosylation of INSR and IRS1, leading to their inhibition (PubMed:[38056462](http://www.uniprot.org/citations/38056462) target="_blank">38056462).

Cellular Location

Cytoplasm

Tissue Location

Predominantly expressed in liver and erythrocytes (PubMed:7929092). At lower levels in heart, lung, adrenal gland and cerebrum (PubMed:7929092). Expressed in adult red blood cells (PubMed:29932944).

BLVRB Antibody (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

BLVRB Antibody (C-term) - Images

Western blot analysis of lysates from human liver, mouse liver tissue and K562 cell line (from left to right), using BLVRB Antibody (C-term)(Cat. #AW5035). AW5035 was diluted at 1:1000 at each lane. A goat anti-rabbit IgG H&L(HRP) at 1:10000 dilution was used as the secondary antibody.

BLVRB Antibody (C-term) - Background

Broad specificity oxidoreductase that catalyzes the NADPH-dependent reduction of a variety of flavins, such as riboflavin, FAD or FMN, biliverdins, methemoglobin and PQQ (pyrroloquinoline quinone). Contributes to heme catabolism and metabolizes linear tetrapyrroles. Can also reduce the complexed Fe(3+) iron to Fe(2+) in the presence of FMN and NADPH. In the liver, converts biliverdin to bilirubin.
