

**AF4 (MLLT2) Antibody (C-term) Blocking peptide**  
Synthetic peptide  
Catalog # BP6189a

**Specification**

---

**AF4 (MLLT2) Antibody (C-term) Blocking peptide - Product Information**

Primary Accession [P51825](#)  
Other Accession [NP\\_005926](#)

**AF4 (MLLT2) Antibody (C-term) Blocking peptide - Additional Information**

**Gene ID** 4299

**Other Names**

AF4/FMR2 family member 1, ALL1-fused gene from chromosome 4 protein, Protein AF-4, Protein FEL, Proto-oncogene AF4, AFF1, AF4, FEL, MLLT2, PBM1

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP6189a](/product/products/AP6189a) was selected from the C-term region of human MLLT2 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**AF4 (MLLT2) Antibody (C-term) Blocking peptide - Protein Information**

**Name** AFF1

**Synonyms** AF4, FEL, MLLT2, PBM1

**Cellular Location**

Nucleus.

**AF4 (MLLT2) Antibody (C-term) Blocking peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

#### **AF4 (MLLT2) Antibody (C-term) Blocking peptide - Background**

MLLT2 is involved in acute leukemias through a chromosomal translocation t(4;11)(q21;q23) that involves mllt2 and mll/hrx. AF-4 (MLLT2), AF-9, and ENL proteins contain nuclear targeting sequences as well as serine-rich and proline-rich regions. Stretches abundant in basic amino acids are also present in the three proteins. These results suggest that the different proteins fused to ALL-1 polypeptide(s) provide similar functional domains. AF4 is a serine- and proline-rich putative transcription factor with a glutamine-rich carboxyl terminus. The composition of the complete MLL-AF4 fusion product argues that it may act through either a gain-of-function or a dominant negative mechanism in leukemogenesis.
