Resistin, rat recombinant protein - Images**Resistin, rat recombinant protein - Background**

Resistin is a new member to the family of adipocyte-secreted proteins. The biological functions of Resistin as well as its molecular target are largely unknown. Whether it promotes or antagonizes insulin action is still unclear. Recombinant rat Resistin is an 11.9 kDa protein consisting of 94 amino acid residues and 16 additional amino acids residues – His Tag.
