

HUNK1, MCAP
Catalog # PVGS1348**Specification**

HUNK1, MCAP - Product Information

Primary Accession [NM_207189](#)
Species
Human

Sequence

MHHHHHTKK NGRLTNQLQY LQKVVLKDLW KHSFSWPFQR PVDAVKLQLP DYYTIKNPM DLNTIKRLE
NKYYAKASEC IEDFNTMFSN CYLYNKPGDD IVLMAQALEK LFMQKLSQMP QEEQ

Purity

> 95% by SDS-PAGE and HPLC analysis.

Endotoxin Level

< 1 EU/ µg, determined by LAL method.

Formulation

**Sterile liquid solution contains 25 mM
HEPES, pH 7.5, 150 mM NaCl, 5% glycerol,
0.5 mM TCEP. Frozen solution.**

HUNK1, MCAP - Additional Information**Target Background**

Bromodomain (BRD) is an extensive family of protein domains, originally identified in and named after the *Drosophila* protein Brahma. Members of BRD family share a conserved atypical left-handed four helix bundle structure, and specifically bind to ε-lysine acetylated proteins. It is well known that histone acetylation and methylation play a central role in epigenetics and are important for various gene transcription events, thus the acetyl-lysine binding property of BRDs make them suitable drug targets for epigenetics. Currently, there are 46 diverse human proteins containing 61 BRDs. These include histone acetyltransferases, ATP-dependent chromatin-remodeling complex proteins, and nuclear scaffold proteins. The main functions of BRDs in vivo include chromatin acetylation and deacetylation, nucleosome assembly and remodeling, and organizations of chromosome or chromatin domains. **Recombinant human BRDT (22-138)** with His tag produced in *E.coli* is a single, non-glycosylated polypeptide chain containing 124 amino acids. A fully biologically active molecule, BRDT (22-138) has a molecular mass of 14.9 kDa analyzed by reducing SDS-PAGE and is obtained by proprietary chromatographic techniques at .

HUNK1, MCAP - Protein Information**HUNK1, MCAP - Protocols**

Provided below are standard protocols that you may find useful for product applications.
