

FGF-basic
Catalog # PVGS1686**Specification**

FGF-basic - Product Information

Primary Accession [XP_035600424.1](#)
Species
Salmon

Sequence
Full length

Purity
≥ 95% as analyzed by SDS-PAGE

Endotoxin Level
< 0.2 EU/ µg of protein by gel clotting method

Biological Activity
EC₅₀ < 1.0 ng/ml as determined by a dose-response proliferation assay using murine Balb/c 3T3 cells. Based on the EC₅₀, the calculated specific activity is approximately $> 1.0 \times 10^6$ IU/mg. It is recommended to experimentally determine the optimal concentration for each specific application by performing a dose response assay.

Expression System
E. coli

Theoretical Molecular Weight
17.1 kDa

Formulation **Lyophilized from a 0.2 µm filtered solution in 7.8 mM Na₂HPO₄, 1.5 mM KH₂PO₄, 2.7 mM KCl, 500 mM NaCl.**

Reconstitution
Before opening, centrifuge the vial briefly to bring the contents to the bottom. Reconstitute the lyophilized powder in PBS up to 100 µg/ml.

Storage & Stability
Upon receiving, the lyophilized product remains stable for up to 6 months at lower than -70 °C. Upon reconstitution, the product is stable for up to 1 week at 4 °C or up to 3 months at -20 °C. Avoid repeated freeze-thaw cycles by making single-use aliquots before the solution is storage at -20 °C.

FGF-basic - Additional Information

Target Background
Fibroblast Growth Factor-basic (FGF-basic), also known as FGF-2, is a pleiotropic cytokine and one of the prototypic members of the heparin-binding FGF family. Like other FGF family members, FGF-basic has the β trefoil structure. In vivo, FGF-basic is produced by a variety of cells, including

cardiomyocytes, fibroblasts, and vascular cells. FGF-basic regulates a variety of processes including cell proliferation, differentiation, survival, adhesion, motility, apoptosis, limb formation and wound healing. FGF-basic can be tumorigenic due to its role in angiogenesis and blood vessel remodeling. The angiogenic effects of FGF-basic can produce beneficial cardioprotection during acute heart injury.
